-Conditions;-

One only at this price, first in gets this bargain

Price refers to machine body only- wide range of accessories -wands, hoses etc. in stock.

**All New
RD 700**

STEAMVAC ROAD SHOW

Sonitron® Australasia Pty Ltd
18 Noble Avenue, Northgate 4013

The Steamvac Roadshow held on 17th and 18th May at Sonitron was a great success. Steamvac has come a long way in recent years and their equipment range is now export quality. There is also the very good feature by being Australian made.

They displayed a range of equipment from Truckmounts to portables. Also bringing with them a range of accessories and hoses. Their new pressure hose is very impressive.

The machine we were most impressed with was the updated version of the HYBRID a machine for all occasions.

Boss 600 Super Hybrid

The most versatile piece of truck mounted carpet cleaning equipment ever created and totally Australian designed and built.

Boss 600 Super Hybrid

WHY KNOCK JOBS BACK WHEN YOU CAN HOT VAPOUR

Specifications

Length: 1250mm

Width: 550mm

Height: 920mm

Hybrid Features

- *Hot Vapour heat exchange system giving you Truck Mount heat from your portable 100 Degrees C in under ten minutes.*
- *3.6 Roots Blower giving you Truck mount suction!*
- *12 KVA generator with key start-work anywhere, anytime!*
- *Hammer tone finish steel frame.*
- *4 safety switch power outlets.*
- *Low oil warning and water shut off.*
- *Portable can be easily removed from.*
- *Van/trailer for the hard to access jobs.*
- *Plumbed to vehicles fuel supply.*
- *National dealer network for servicing*

Weight: 265kg

Operation of the Hybrid

The Hybrid is renowned as the Most Universal Portable Truck mount available on today's market. It creates all the power to run your portable and accessories as well as the supply of hot water. The portable, booster, gulpa, etc. are powered by the generator, thus eliminating separate power leads throughout customers houses and no more blowing of fuses and circuits.

Heat Exchange System: Award winning HOT VAPOUR heat exchange system. Hotter temperatures than other systems ensuring drying times are reduced. No moving parts along with any difficult heating controls ensuring less downtime compared to other systems. Proven reliability and performance with reduced maintenance. Maximum and consistent heat during working times over long lengths of hoses. Large triple insulated tank made from stainless steel and protected from heat produced via engine exhaust, no need for catalytic heat boosters. Five-year warranty subject to correct maintenance and servicing.

Cold water travels through the pump of the portable. This ensures longer pump life, as the seals aren't placed under heat. Any external garden tap can provide an immediate water source. The vacuum is created from the Roots Blower for as long as you are using it as a Truck Mount, if you are using the portable as a stand alone you simply use the vacuum motors built into the portable. True truck mount features with the portability of using your portable to access multi level buildings.
