

# ***PROTECTION OF CARPETS & FABRICS***

We have been supplying top quality fluorochemical protectors for carpets and fabric upholstered furniture for many years. We have the range to fulfil your needs at very competitive prices.

## **BROLLY® FABRIC PROTECTOR**

This solvent based product is mainly used on furniture fabrics. It dries more rapidly than any water based product and cures much more rapidly, being fully cured on the day following application. It is particularly suitable for fabrics of the “dry clean only” type, which may be damaged by contact with water or water based fluids. This applies also to fittings such as metal buttons which may rust on contact with water. Brolly® Fabric Protector is ideal for drapes which may shrink or stretch when wetted. While it is classified as Class 3 Flammable under the Dangerous Goods transport regulations, its flash point (52°C) is relatively high in comparison with other commonly used Flammables such as Methylated Spirits (flash point 13°C) so it is much safer to handle. It is a very versatile product, and has been used on everything from ties to joggers. It is acceptable for our warranty scheme when applied to NEW furniture only.

## **BROLLY® SP 2000**

This premium water based product has been designed for application to new furniture fabrics in any circumstances where solvent based products are not acceptable. For example – some furniture fabrics have a polymer backing and fabric manufacturers normally recommend that solvent based cleaners or protectors should not be used on these. Brolly® SP 2000 also qualifies for use with our warranty scheme for treating NEW furniture. By having 2 quality products, one water based and one solvent based, we can provide the best solutions to any problems arising in the protection of furniture fabrics and drapes.

## **BROLLY® CARPET & FABRIC PROTECTOR CONCENTRATE**

The principal use of this product is to treat both carpets and upholstery immediately after cleaning, while they are still damp. Experience and field testing have shown that this formulation can perform well when traces of detergent are present following cleaning. (We do recommend the use of specific Sonitron® detergents, followed by thorough rinsing, with either water or Sonitron® Fiberinse, before application of Brolly® protection). Being highly concentrated, this Brolly® product offers great economy in use, and minimises freight charges.

Comprehensive technical product bulletins with detailed directions and advice for the best use of each Brolly product are available.
