SONITRON® BRIEFS

**HOW YOU CAN
HELP THE
ENVIRONMENT.**

**START
ENCAPPING
TO-DAY AND USE
LESS WATER AND
POWER**

We have all the equipment and accessories you could possibly need for encapsulation cleaning, and all at very competitive prices. See page 3 for more details.

SPECIAL POINTS OF INTEREST

Looking for a way to make the encapping of stairs and upholstery easy to do.

The new Volkafoam foam sprayer for use in applying encap is proving a great success.

Available in 1 litre size for stairs and upholstery

5lt size for use when you do not have a tank on your low speed rotary and want to do an encap job.

**You have asked for it, here it is!!!
ZENITH Plus with Protection.**

You NOW have the choice

ZENITH Plus
A great addition to our range of products that work. Contains Fluorochemical. You can protect while you clean.

For the longest and the best protection we recommend Sonitron® Brolly® applied as a separate operation after cleaning. However you can't beat the economy of a single clean and protect application, that gives surprisingly good results.

ZENITH Encapsulation Shampoo
New Anti-Freeze Formula GIVES A GREAT CLEAN

We have overcome the freeze problem which has been common with many encap products. Both these new formulas have resisted freezing after prolonged storage at low temperatures.

FREE ZENITH

ENCAP SPOT AND STAIN REMOVER

Mention this advert, and you will receive a free Zenith Encap Spot and Stain Remover when you purchase Zenith or Zenith Plus.

ZENITH PLUS HAS ARRIVED

5LT PACKS \$81.70 plus gst
15LT PACKS \$237.00 plus gst
20LT PACKS \$295.00 plus gst

Adapting to new Australian Chemical Regulations

An obligation under Queensland legislation is to continuously improve safety, *Chemical safety improvement is a permanent feature in our laboratory.*

New Australian Dangerous Goods regulations (No.7) will be finalised shortly. The draft regulations have been under consideration for a long time and have created a good deal of controversy.

One provision of the new regulations that attracted our attention some time ago relates to pH requirements. Chemical products with a pH over 11.5 or less than 2.0 will automatically be classified as dangerous goods. This will have implications for storage as well as transit by road and rail. We are finding that many carriers have greatly increased their charges for dangerous goods, since the regulations involve a lot more work for them when handling products in this classification.

In many cases it is a “double whammy” since it affects the transport to the distributors and from the distributor to the customer.

Our response has been to look at key products which may be affected by this provision and see whether they can be marketed at pH values which do not attract this unwelcome attention. The challenge is to ensure that the products work equally well or better after modification. We have been working on this for some time and have had a great deal of success, both with the design of new products and modification of existing products.

An interesting example is our popular SK50. A versatile product which finds application in cleaning both carpets and hard surface floors. This product acts primarily by breaking up and emulsifying the oil and grease which binds so many soils. It is the material of choice for cleaning polypropylene carpets, which have an almost magnetic attraction for oil and grease, and is also popular for tile cleaning with the appropriate tile cleaning attachments to carpet cleaning machines. In many cases tiled areas are adjacent to carpet and if you use acids such as phosphoric for the tile cleaning it is not a good idea to accidentally contact the adjacent carpet. There is also the possibility that the expensive equipment will be adversely affected.

None of these problems occur when using SK50, and the new improved version of this product which operates even more effectively at lower pH is now available, and is clearly identified by the ‘New Improved Product’ sticker. It is not classified as Dangerous Goods now and will not be in the future. The best news is that its power to attack oil and grease has been increased by a factor of 4 on laboratory test, and we have excellent reports from the field tests.

For those who prefer an acidic product for tile cleaning we have modified our original Seraclean formula. It is now a mild acid formula which is not, and will not be classified as Dangerous Goods. It is not a problem if accidentally spilled on carpet and is not aggressive to the equipment. It is however very effective at removing soil and provides a useful alternative for those who prefer a safe product.

SONITRON® is pleased to announce MASSIVE IMPROVEMENTS to our Already Effective & Popular SK50

- Oil and grease emulsification improved by a factor of 4
- Lower pH can now be used on any fibre including wool and stain resist nylon
- Improved Economy

**Look for the GREEN
“NEW IMPROVED PRODUCT”
stickers to identify the NEW product.
GREAT RESULTS - SUPER ECONOMY**

EQUIPMENT TO COMPLETE YOUR ENCAP KIT

Cyclone CR Series - Scrubber Polishers

Cyclone scrubber/polishers are multi-purpose machines suitable for cleaning and polishing virtually every type of flooring from concrete to wood, vinyl to carpet or rubber to tiles.

The whole machine is very stable and due to the contra-rotating action of the brushes, cables are naturally deflected away rather than potentially snagging into the machine. As there are always two wheels on the floor at any time, they are easy to manoeuvre too, while the belt drive means that they run very smoothly and quietly.

Technical Specification

Description	Cyclone 38 CR38	Cyclone 38 Shampoo CRS38	Cyclone 48 CR48	Cyclone 61 CR61	Cyclone 76 CR76
Motor power (watts)	370	370	550	1100	1100

Height (cm)	112	112	112	112	112
Theoretical coverage: (m ² /hr)					
Scrubbing	1140	-	1140	1830	2280
Polishing	1710	-	2160	2745	3420
Spray Clean	850	-	1080	1372	1710
Shampooing	-	1140	1440	1830	2280

A complete range of brushes is available for carpet shampooing, scrubbing hard floors, cleaning quarry tiles and any dimpled or uneven floor surface.

The triple-brush cleaning mechanism incorporates a contra-rotating planetary drive disc. This gives a vigorous action that cleans in all directions with the brushes cleaning deep into the grouting of tiled floors, around the contours of rubber studded non-slip floors or into the pile of carpets.

NUCCA MEETS AT SONITRON® on 26th June, 2007

*This meeting will be at **SONITRON® 18 Noble Avenue, Northgate**. NUCCA is issuing an invitation for all to attend. The current format is a 6pm start for those wishing to have a meal, and the meeting will start at 7p.m. To allow for catering it is essential to book for a meal, a \$20 charge will apply. RSVP to Sonitron® on 07 32669966, or NUCCA on 1800621872. Chemical samples and lucky door prizes for those attending. Everyone attending will be a winner.*

Sonitron® will be discussing and demonstrating the massive improvements we have made to the already successful SK50, and demonstrating their new products for encapsulation. Both chemicals and equipment will be demonstrated. People with considerable practical experience in encapsulation will be present and available to answer questions on the current status of encapsulation and the business opportunities it presents, and the relationship to current water shortages.

We will be taking questions on the new Australian Dangerous Goods Regulations. As stated on page 2 you will notice that it is proposed that any chemical products with a pH of 11.5 or more and under 2 will be automatically classified as dangerous goods. You will need to know how this will affect you and the chemicals you use and carry in your van. All in all we expect this to be a very interesting and educational evening. Phone Sonitron® on 07 32669966 for further details.
