ALFOAM **LIQUID DETERGENT**

PRODUCT DESCRIPTION

ALFOAM is a highly effective detergent based on renewable resources. ALFOAM is highly biodegradable. ALFOAM is identified by a pale green colour and has a fresh lemon fragrance. It is close to neutral in pH. ALFOAM keeps on cleaning long after others have given up.

APPLICATIONS

Hand Dishwashing

ALFOAM has been formulated to effectively clean dishes by removing the proteins, carbohydrates and fats encountered in kitchens and food preparation areas. Use as required for even the heaviest of cleaning in kitchens.

Hard Surfaces

Walls, floors, ceramics, stainless steel, paint and plastics, in fact all washable surfaces.

Vinyl Floors

A near neutral detergent is essential. ALFOAM removes soils and helps to restore the high gloss achieved in modern floor treatment systems, and does not remove or damage the floor polish or sealer.

DIRECTIONS FOR USE

Hand Dishwashing

Use for 20mls per sinkful, or more, according to the degree of soiling encountered.

Hard Surfaces

Use from 10 mls to 250 mls per bucket of water in hot or cold water. Mop to remove soils. Rinse with clean water as necessary.

Vinyl Floors

Use from 10 mls to 100 mls per bucket of COLD water depending on the amount of soiling. Mop the surface to remove the soils and rinse with clean water.

SAFETY NOTES

The product is not hazardous according to Worksafe Australia Criteria. Read the Material Safety Data Sheet before opening the container or using for the first time. Where prolonged or repeated skin contact can occur, such as hand dishwashing, wear gloves or other protective gear as required.

STORAGE CONDITIONS

Avoid extremes of temperature (such as freezing) in the storage area. Keep containers well sealed and out of the reach of children. ALFOAM should be stored away from strong chemicals and poisons.
